PROFESSIONAL SUMMARY

Cloud- and systems-focused student who designs, builds, and self-hosts full-stack web applications and AI inference pipelines on local GPU hardware — owning deployment, DNS, uptime, and troubleshooting end to end. Pairs that with customer-facing communication, payment testing, and collaborative Git-based development. Pursuing the AWS Certified Cloud Practitioner certification.

TECHNICAL SKILLS

Cloud & DevOps: AWS, Docker, GitHub Actions, Linux, Self-Hosted Deployment, Systems Administration
Programming: Python, JavaScript, TypeScript, C#
AI & Computer Vision: ComfyUI, Local Model Inference, Whisper, YOLOv8, OpenCV, GPU Workload Management
Automation & Testing: Playwright, pytest, GitHub Actions CI, Workflow Automation, Automation Scripting
Web & Systems: FastAPI, Next.js, SQLite, WebSockets, REST APIs, Git, DNS & Domain Config, Site Reliability

EXPERIENCE

Freelance Web Developer — Self-Employed 2024 – Present

- Design, build, deploy, and maintain production websites for small-business clients end to end — layout and build through DNS, hosting, and ongoing uptime
- Delivered gsi.fluximetry.com, a live Next.js marketing site for GSI Sand & Gravel — a 30+ year Temecula sand & gravel supplier — and manage its hosting and maintenance

Riffyx Labs Mentorship — Mentored by Cisco Professionals 2025 – 2026

Mentee / Project Collaborator

- Built hands-on experience with AWS fundamentals, debugging, and real-world technical issues in mentored projects
- Used Git-based workflows to make code updates, work across branches, and submit pull requests for review alongside experienced engineers

Cheryl's Caramels — Oceanside, CA 2022 – 2025

Team Member

- Represented the company at markets and events, engaging customers and resolving product questions; handled cash and digital transactions accurately
- Tested Stripe payment flows for the e-commerce site before release to verify checkout and payment reliability

TrashCan Powerwashing — Co-Founder Aug – Oct 2025

- Co-founded a residential trash-can power-washing business; managed scheduling, customer communication, cash handling, and income/expense tracking

PROJECTS

Qorlyt — Image-to-3D Generator — qorlyt.com

- Built and self-host a live web product that turns a single image into a textured 3D model in ~80 seconds via a local ComfyUI + Hunyuan3D 2.1 GPU pipeline
- Engineered a persistent WebSocket to ComfyUI for real-time per-node progress plus an async job queue with live position and ETA; FastAPI backend with in-browser 3D viewer

Lyric Generator — github.com/ethanstoner/lyric-generator

- FastAPI pipeline turning a Spotify link into a lyric video: metadata → yt-dlp audio → Whisper word-level timing → Pillow rendering → ffmpeg
- Async job queue with graceful failure handling on every external call; packaged with pyproject.toml and tested in GitHub Actions CI on every push

CSUSM Campus Monitor — github.com/ethanstoner/csusm-monitor

- Real-time campus occupancy monitor: YOLOv8 person detection on live HLS streams with custom false-positive filtering
- FastAPI backend with SQLite time-series storage and an interactive dashboard (live video, heatmaps, best-times); CI-tested

AI-Generated 3D Digital Assets

- Design, generate, and publish 3D digital assets for sale via a locally hosted ComfyUI + Hunyuan3D inference pipeline on personal GPU hardware, with ongoing recurring sales

EDUCATION & CERTIFICATION

Great Oak High School — Expected Graduation: June 2026

AWS Certified Cloud Practitioner (CLF-C02) — In Progress
